DEEP QUERY ASK

SALESFORCE SERVICE CLOUD – CASE MANAGEMENT

Complete End-to-End Project File

BRD • FRD • Business Analysis • Process Design • Configuration • Automation • SLA • Escalation • Reporting •
Testing • UAT

1. Document Control

Field	Details
Document	Salesforce Service Cloud – Case Management Project Documentation
Type	Complete Business Analyst Project File
Version	1.0
Status	Final
Platform	Salesforce Service Cloud
Contents	BRD + FRD + Process + Configuration + Automation + Testing + UAT + Reporting

Requirements not explicitly defined in the source project material are kept open rather than invented.

2. Project Document Structure

- Business Analysis & BRD
- Functional Requirements & FRD
- Solution/Data Model
- Salesforce Configuration
- Automation, SLA & Escalation
- Reports & Dashboard
- Testing & UAT
- Traceability, Risks & Future Scope

3. Executive Summary

This project moves customer-support operations from manual Excel/email tracking to a centralized Salesforce Service Cloud Case Management solution. It provides structured Case creation, automated ownership, lifecycle management, SLA monitoring, escalation, notifications and management reporting.

4. Business Context

Customer requests may arrive through different channels and require consistent ownership, tracking and follow-up. Salesforce provides a central Case record and standard service-management capabilities.

5. Business Need

- Single source of truth for Cases.
- Clear ownership.
- Consistent Case classification.
- Automated routing.
- SLA visibility.
- Escalation capability.
- Communication/history tracking.

- Management reporting.

6. AS-IS Process Analysis

Customer Request → Email/Excel Tracking → Manual Assignment → Manual Follow-up → Manual SLA Check → Resolution → Manual Reporting

Area	Current Challenge	Impact
Intake	Multiple/manual channels	Inconsistent information
Ownership	Manual coordination	Unclear responsibility
Tracking	Excel/email follow-up	Limited visibility
SLA	Manual monitoring	Risk of missed commitments
Escalation	Manual follow-up	Delayed intervention
Reporting	Manual consolidation	Time-consuming

6.1 BA Observation

The target solution should standardize intake, ownership, tracking, SLA monitoring and reporting without adding out-of-scope integrations.

7. TO-BE Process

Case Created → Assigned → Worked → SLA Monitored → Escalated if Required → Resolved → Closed

- Customer submits through Web-to-Case or Email-to-Case.
- Salesforce creates a Case.
- Case information is captured and classified.
- Assignment Rule routes defined Case Types.
- Billing → Billing Support Queue.
- General → Customer Support Queue.
- Support user works the Case.
- Entitlement/Milestone supports SLA monitoring.
- Escalation capability handles configured escalation.
- Case is resolved/closed.
- Reports and dashboard provide visibility.

8. Project Objectives

- Centralize Case management.
- Reduce manual tracking.
- Improve ownership and routing.
- Standardize lifecycle.
- Monitor SLA commitments.

- Support escalation.
- Maintain history/comments.
- Provide management visibility.

9. Scope

9.1 In Scope

- Email-to-Case
- Web-to-Case
- Case Assignment Rules
- Case Lifecycle Management
- Entitlement/SLA Tracking
- Case Escalation
- Reports and Dashboards

9.2 Out of Scope

- Telephony/CTI
- Chatbot/AI
- ERP/Billing integration
- Knowledge-base automation (future phase)

10. Stakeholders & Actors

Actor	Responsibility
Customer	Raise/communicate support issue.
Support Agent	Work and update assigned Cases.
Billing Support Team	Handle Billing Cases.
Customer Support Team	Handle General Cases.
Support Manager	Monitor workload, SLA, escalation and reports.
System Administrator	Configure Salesforce, security, automation and reporting.

11. Communication Needs

Stakeholder	Information	Output
Customer	Case status/updates	Configured email/customer notification
Agent	Case details/ownership	Salesforce Case
Manager	Status/Priority/Origin/SLA	Reports/Dashboard
Administrator	Configuration/audit	Salesforce Setup/records

12. Assumptions

- Users maintain accurate Case information.
- Queue members are available.
- Required Salesforce features are available.
- Final SLA duration and escalation thresholds are confirmed by business when required.

13. Business Requirements

ID	Requirement
BR-01	Centralize Case management in Salesforce.
BR-02	Support Email-to-Case and Web-to-Case.
BR-03	Automatically route defined Case Types.
BR-04	Support Case lifecycle management.
BR-05	Monitor SLA using Entitlements/Milestones.
BR-06	Provide escalation capability.
BR-07	Maintain communication and change history.
BR-08	Support Case-related notifications.
BR-09	Provide reports and dashboard.
BR-10	Control Case access.

14. Business Rules

- Billing Case Type → Billing Support Queue.
- General Case Type → Customer Support Queue.
- Technical is a classification value; no Technical routing is assumed.
- SLA uses Entitlement/Milestone capability.
- Escalation follows an approved business threshold.
- Case access follows Salesforce security controls.

15. Functional Requirements

ID	Functional Requirement
FR-01	Case creation captures Case Type, Priority, Status, Origin and Description.
FR-02	Billing Cases route to Billing Support Queue.
FR-03	General Cases route to Customer Support Queue.
FR-04	Cases support lifecycle/status management.
FR-05	Entitlement Process supports SLA tracking.
FR-06	Case Milestones support SLA tracking.
FR-07	Escalation capability is configured.
FR-08	Case Comments and History are available.
FR-09	Reports provide Status/Priority/Origin visibility.
FR-10	Dashboard provides management visibility.

16. Acceptance Principles

- Requirement behaviour must match approved business rules.
- Automation must be testable.
- Reports must reflect Case data.
- Security must restrict access appropriately.
- Undefined values must be confirmed rather than assumed.

17. Salesforce Data Model

Object	Purpose
Account	Customer/account information.
Contact	Customer contact.
Case	Primary support issue.
Case Comment	Communication updates.
Case History	Relevant Case changes.
Entitlement	SLA/service entitlement.
Case Milestone	SLA milestone tracking.
User	Support/system user.

Logical view: Account → Contact → Case; Case → Comments/History; Case → Entitlement → Milestone; Case → User/Queue ownership.

18. Data Security Model

Salesforce object permissions, field-level security, record sharing, profiles/permission sets and queue membership control who can access and modify data.

19. Case Field Specification

Field	Type / Values	Purpose
Case Type	Billing / General / Technical	Classification
Priority	Low / Medium / High	Urgency
Status	Standard Case status	Lifecycle
Origin	Email / Web / Phone	Intake channel
Subject	Text	Short summary
Description	Long Text	Detailed issue
Account Name	Lookup	Customer account
Contact Name	Lookup	Customer contact
Case Owner	User/Queue	Responsible owner
Case Number	Auto-number	Unique reference

20. Case Page Layout

- Case Owner
- Case Number
- Contact Name

Page

- Account Name
- Case Type
- Status
- Priority
- Contact Phone/Email
- Case Origin
- Subject
- Description
- Internal Comments

21. Web-to-Case Functional Design

Web Form → Web-to-Case → Salesforce Case → Assignment Rule → Queue/User

- Web-to-Case must be enabled.
- Origin should identify Web.
- Issue details should be captured.
- Created Case should be visible to authorized support users.
- Assignment is applied where the active assignment rule is used.

The screenshot shows the Salesforce Setup interface. At the top, there's a "Developer Edition" label and a search bar. Below the search bar, the "Setup" menu is open, showing "Home" and "Object Manager". The "web-to-case" search results are displayed on the left, with "Web-to-Case" selected. The main content area shows the "Web-to-Case" settings page. Under "Basic Settings", "Enable Web-to-Case" is checked, "Require reCAPTCHA Verification" is unchecked, and "Default Case Origin" is set to "Web". Under "Auto-Response Email Settings", the "Default Response Template" is "Support: Case Created (We", "Hide Record Information" is unchecked, and the "Email Signature" field is empty.

22. Email-to-Case Functional Design

Customer Email → Email-to-Case → Salesforce Case → Assignment Rule → Queue/User

- Email-to-Case must be enabled.
- Routing address/verification depends on org configuration.
- Test email should create a Case.
- Subject/description mapping should be checked.
- Ownership should be verified.

Routing Addresses

New Email2Case

Action	Source	Routing Name	Case Owner	Email Address	Verification	Controlled by Permission Set	Email Services Address
Edit Del	Email2Case	Support Email	Billing_Support Queue	lavina03014@gmail.com	Verified	No	lavina03014@w-73sk4387zurtu3f5edw8yc0pjp773lh463r6mxt6a7uqdxblk_bm-z3co5eam_usa876.case.salesforce.com

23. Assignment & Routing

Condition	Action
Case Type = Billing	Billing Support Queue
Case Type = General	Customer Support Queue
Case Type = Technical	No separate routing specified

The screenshot shows the Salesforce Setup interface for Case Assignment Rules. The left sidebar contains navigation links for Feature Settings, Marketing, Lead Assignment Rules, Salesforce Scheduler, Assignment Policies, Service, Case Assignment Rules, and Topics. The main content area displays the 'Case Assignment Rules' configuration page. The 'Rule Detail' section shows the rule name 'Case assignment', its status as 'Active', and its creation/modification details. The 'Rule Entries' table lists four rules with their criteria and assigned queues.

Action	Order	Criteria	Assign To	Email
Edit Del	1	(Case: Case Type EQUALS Billing) AND (Case: Priority EQUALS High)	Billing Support Queue	☐
Edit Del	2	Case: Case Type EQUALS Billing	Billing Support Queue	☐
Edit Del	3	Case: Case Type EQUALS General Inquiry	Customer Support Queue	☐
Edit Del	4	Case: Case Type EQUALS Technical	Technical support Queue	☐

24. Assignment Rule Design

- Assignment Rule evaluates Case Type.
- Billing Support Queue supports Case ownership.
- Customer Support Queue supports Case ownership.
- Manual Case creation can use the active assignment rule when selected.
- No extra Technical queue is added without a requirement.

25. Assignment Test Evidence

Billing test Case: Billing → Billing Support Queue.

General test Case: General → Customer Support Queue.

26. Case Lifecycle

Stage	Purpose
Created	Case enters Salesforce.
Assigned	Ownership established.
Worked	Support processing.
SLA Monitored	Entitlement/Milestone tracking.
Escalated (if required)	Additional attention.
Resolved	Issue addressed.
Closed	Case completed.

27. Status Design Note

The source project describes the lifecycle but does not define every status value or transition. This document therefore does not invent a complete status configuration.

28. SLA / Entitlement Management

Entitlement Management provides the service-level framework. The Entitlement Process supports SLA tracking and Case Milestones provide milestone-level tracking.

Component	Purpose	Project Configuration
Entitlement Management	Enable SLA capability	Enabled
Entitlement Process	SLA process	Configured/Active
Case Milestone	Track milestone	Created
SLA Duration	Business-defined value	Not invented

Action	Order	Name	Recurrence Type	Criteria	Minutes To Complete Milestone	Time Trigger Apex Class	Start Time	Business Hours	Is Displayed on Linked Entity	Is Agentic
Edit Del	1	First Response to Customer	No Recurrence	Case: Status EQUALS New	60		Entitlement Process		☐	☐

[Back To Top](#) Always show me [more records per related list](#)

29. SLA Acceptance Criteria

- Eligible Cases can be associated with the SLA process.
- Milestone information can be reviewed.
- Any final numeric SLA duration is approved before production use.

30. Case Escalation

Item	Configuration
Rule	Case Escalation Rule
Entry	Escalation Entry
Order	1
Status	Active
Timing/Threshold	Requires approved business value

31. Escalation Acceptance

- Rule is active.
- Approved condition triggers configured action.

- Escalation can be verified in testing.
- No unsupported timing is assumed.

32. Case Comments & History

Case Comments store communication updates. Case History provides traceability of relevant Case changes such as status and ownership changes. Related lists should be exposed on the Case record page.

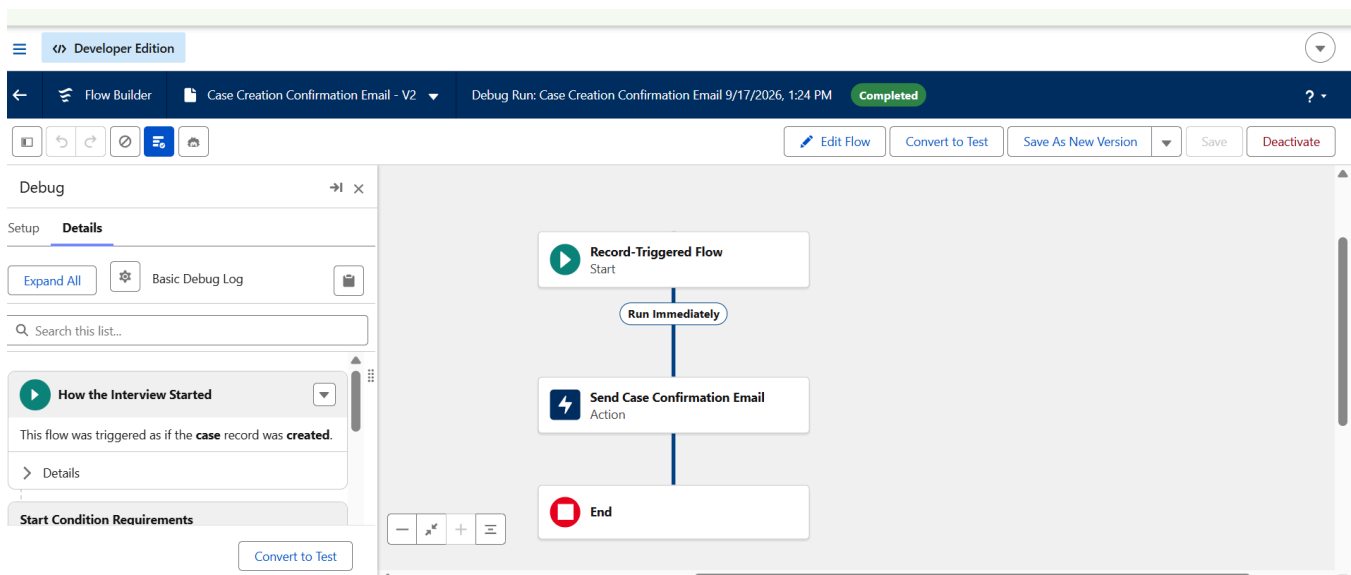

33. Notifications & Flow

The solution supports notification requirements where a clear business trigger, recipient and message are defined.

34. Flow Design

Case Event/Approved Status Condition → Flow → Send Email → Intended Recipient

- Use a clear trigger.
- Avoid duplicate emails.
- Validate recipient logic.
- Test positive and negative paths.
- Keep message content maintainable.

35. Automation Inventory

Automation	Purpose	Status
Assignment Rule	Billing/General routing	Active
Entitlement Process	SLA tracking	Active
Escalation Rule	Escalation capability	Active
Email Flow	Status/customer notification	Configured as required

36. Security & Access

Layer	Purpose
Object Permission	Access to Case and related objects.
Field Security	Field visibility/editability.
Record Sharing	Record-level access.
Queues	Team ownership.
Profiles/Permission Sets	User capabilities.

Implemented Case sharing is Private. Production security should be reviewed before deployment.

37. Security Test Checklist

- ☐ Case object access
- ☐ Case field access
- ☐ Queue membership
- ☐ Report/dashboard access
- ☐ Sensitive field protection

38. Reports

Report	Grouping / Purpose
Case Status Report	Grouped by Status; operational lifecycle visibility.
Case Priority Report	Grouped by Priority; urgency/workload visibility.
Cases by Origin Report	Grouped by Origin; channel visibility.

39. Dashboard

Component	Chart	Purpose
Cases by Status	Donut	Lifecycle distribution
Cases by Priority	Bar	Priority distribution
Cases by Origin	Bar	Channel distribution

40. Management Questions

- How many Cases exist by Status?
- How are Cases distributed by Priority?
- Which intake channel is used?
- Which teams/owners have Cases?
- What current workload is visible?

41. Complete Salesforce Configuration Inventory

Component	Purpose	Status
Case Type	Classification	Configured
Case Page Layout	Required information	Configured
Billing Support Queue	Billing ownership	Configured
Customer Support Queue	General ownership	Configured
Assignment Rule	Routing	Active
Web-to-Case	Web intake	Enabled
Email-to-Case	Email intake	Enabled
Entitlement Management	SLA	Enabled
Entitlement Process	SLA process	Active
Escalation Rule	Escalation	Active
Reports	Visibility	Created
Dashboard	Management view	Created

42. Implementation Governance

Configuration changes should be documented, tested and reviewed against the BRD/FRD before activation.

43. End-to-End Implementation Steps

- 1. Review requirements and scope.
- 2. Configure Case Type and standard fields.
- 3. Configure Page Layout.
- 4. Enable Web-to-Case.
- 5. Enable Email-to-Case.
- 6. Create Billing Support Queue.
- 7. Create Customer Support Queue.
- 8. Configure/activate Assignment Rule.
- 9. Configure security/sharing.
- 10. Enable Entitlement Management.
- 11. Create Entitlement Process/Milestone.
- 12. Configure/activate Escalation Rule.
- 13. Configure notification Flow.
- 14. Create Status report.
- 15. Create Priority report.
- 16. Create Origin report.
- 17. Build Dashboard.
- 18. Test Billing routing.
- 19. Test General routing.
- 20. Execute UAT and capture evidence.

44. Configuration Quality Checklist

- No unnecessary queues/rules.
- Routing matches requirements.
- Automation has a business purpose.
- Reports use meaningful groupings.
- Security reviewed.
- Testing evidence retained.

45. Test Strategy

Testing covers configuration, routing, intake, SLA, escalation, notifications, security, reports and dashboard. Both positive and negative scenarios should be considered.

46. Functional Test Cases

ID	Scenario	Expected Result
TC-01	Billing Case + active assignment	Billing Support Queue owner
TC-02	General Case + active assignment	Customer Support Queue owner
TC-03	Technical classification	Classified; no invented routing
TC-04	Web-to-Case submission	Case created
TC-05	Email-to-Case email	Case created
TC-06	Eligible Case for SLA	Entitlement/Milestone available
TC-07	Approved escalation condition	Configured escalation occurs
TC-08	Status report	Correct grouping
TC-09	Priority report	Correct grouping
TC-10	Origin report	Correct grouping
TC-11	Dashboard	Components display correct data
TC-12	Security	Access follows permissions

47. UAT Scenarios

UAT	Scenario	Expected Outcome	Result
UAT-01	Billing routing	Correct queue	☐
UAT-02	General routing	Correct queue	☐
UAT-03	Web intake	Case created	☐
UAT-04	Email intake	Case created	☐
UAT-05	SLA	Milestone/SLA visible	☐
UAT-06	Escalation	Configured action	☐
UAT-07	Comments/History	Visible on Case	☐
UAT-08	Reports	Correct data	☐
UAT-09	Dashboard	Correct charts	☐
UAT-10	Security	Correct access	☐

48. Requirements Traceability Matrix

BR	FR	Salesforce Area	Test
BR-01	FR-01	Case	TC-01/02
BR-02	FR-01	Web/Email-to-Case	TC-04/05
BR-03	FR-02/03	Queues + Assignment	TC-01/02
BR-04	FR-04	Lifecycle	UAT-01/02
BR-05	FR-05/06	Entitlement/Milestone	TC-06
BR-06	FR-07	Escalation	TC-07
BR-07	FR-08	Comments/History	UAT-07
BR-08	FR-08	Flow/Email	UAT-07
BR-09	FR-09/10	Reports/Dashboard	TC-08–11
BR-10	FR-10	Security	TC-12

49. BA Artifacts Included

- Business requirements
- Functional requirements
- AS-IS/TO-BE analysis
- Stakeholder analysis
- Business rules
- Data model
- Field specification
- User stories
- Acceptance criteria
- Test cases
- UAT
- Traceability matrix
- Risks/assumptions/dependencies
- Reports/dashboard design

50. Risks

Risk	Impact	Mitigation
Incorrect routing	Wrong team ownership	Test assignment rules.
Incomplete Case data	Delayed resolution	Use clear required fields.
Undefined SLA	Cannot finalize numeric timing	Obtain business approval.
Undefined escalation threshold	Timing cannot be finalized	Confirm threshold.
Page layout issue	Related info not visible	Review Page Layout/Lightning page.
Security error	Wrong access	Validate permissions/sharing.

51. Dependencies

- Salesforce feature/license availability.
- Email-to-Case routing/verification.
- Web-to-Case deployment.
- User/queue setup.
- Final SLA and escalation definitions.
- Production security approval.

52. Change Management

- Log requirement/configuration changes.
- Assess BRD/FRD impact.
- Retest affected functionality.
- Update document version before release.

53. Future Enhancements

- Knowledge-base automation
- Chatbot/AI support
- Telephony/CTI integration
- ERP/Billing integration
- Advanced SLA analytics
- Additional dashboards

54. Final Project Completion Checklist

- ☐ BRD
- ☐ FRD
- ☐ AS-IS/TO-BE
- ☐ Scope
- ☐ Stakeholders
- ☐ Data model
- ☐ Case fields
- ☐ Queues
- ☐ Assignment rule + testing
- ☐ Web-to-Case
- ☐ Email-to-Case
- ☐ Entitlement/SLA
- ☐ Escalation
- ☐ Comments/History
- ☐ Notifications
- ☐ Security
- ☐ Reports
- ☐ Dashboard
- ☐ Test cases

- ☐ UAT
- ☐ Screenshots/evidence
- ☐ Final review

55. Final Project Summary

This document provides a single end-to-end Business Analyst project file connecting business requirements to Salesforce functional design, configuration, automation, reporting and UAT. It can be used as the main project documentation file for portfolio or academic demonstration.

— END OF PROJECT DOCUMENTATION —
